3D WEBSOFT INC. FOUNDATION

FUTURE TECH SCHOOL PROGRAM

Faculty Name :

Course Duration : 5 Months

Classes : Offline & Online

Daily Teaching : 2 Hours

Total Classes : 100

Level 2 – Young Technologist (7th–8th Standard)

Lesson 14: First Python Program

3D WEBSOFT FOUNDATION

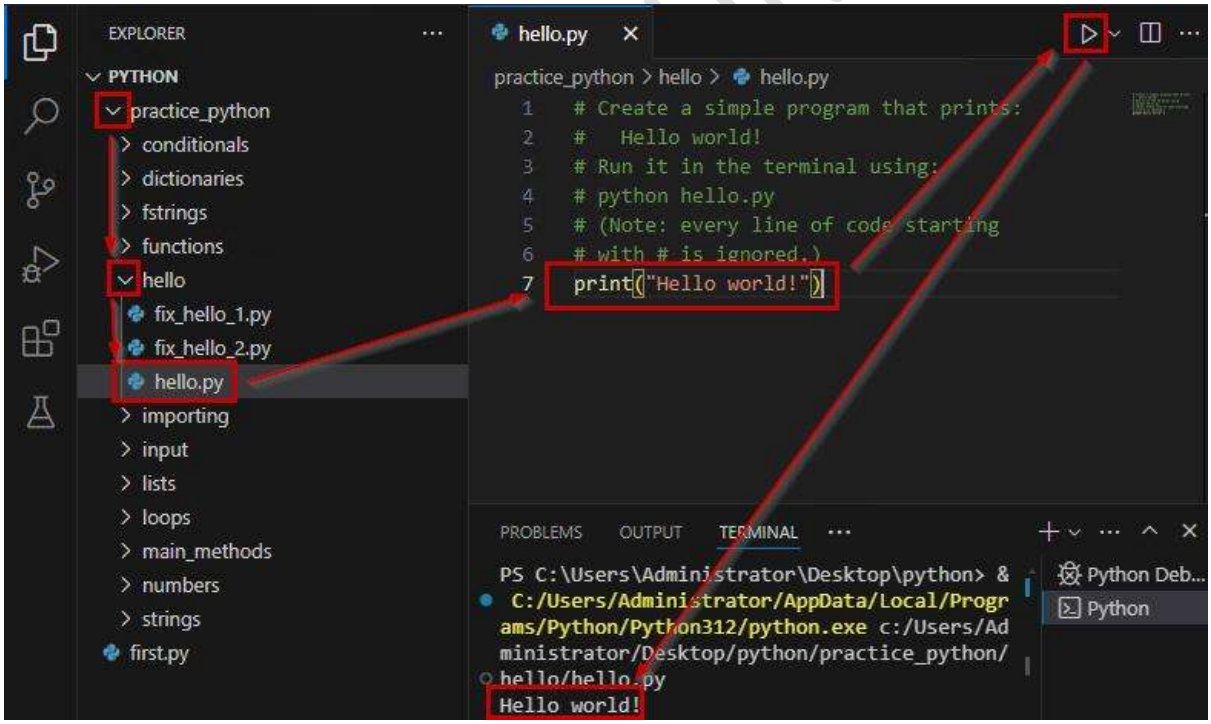

Learning Objectives

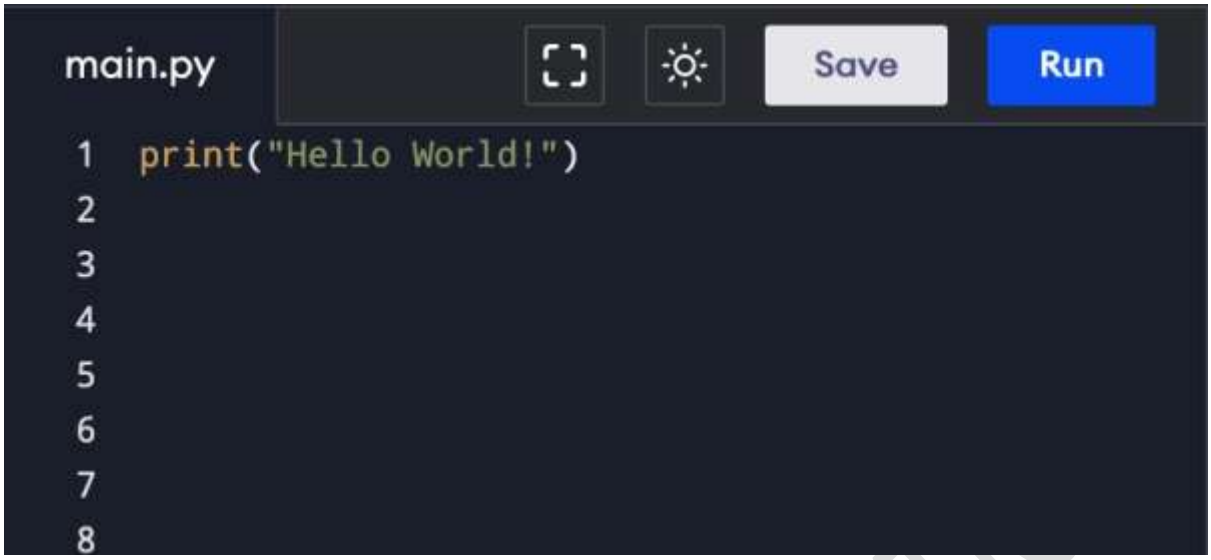

By the end of this lesson, students will be able to:

- Understand what a Python program is.
- Write their first Python program.
- Use the print() function.
- Save and run a Python file in VS Code.
- Correct simple coding mistakes.
- Create fun programs using text and numbers.

NDATION

What is a Python Program?

A **Python program** is a set of instructions written in the Python language that tells a computer what to do.

Think of it like giving instructions to a friend:

👩 Student → "Please open the book."

💻 Computer → "Please print Hello."

The computer follows the instructions exactly as we write them.

What is Coding?

Coding means writing instructions for a computer using a programming language.

Example:

- 📝 Write instructions
- 💻 Computer reads them
- ▶ Computer performs the task

Python makes coding easy because its commands are simple and readable.

3DWEBSOFT FOUNDATION

What is print()?

The **print()** function displays text or numbers on the screen.

Syntax:

print("Message")

The word inside quotation marks is displayed as the output.

Writing Your First Program

Open **VS Code**.

Create a file named:

hello.py

Type the following code:

print("Hello, World!")

Save the file by pressing:

Ctrl + S

Run the program in the Terminal:

python hello.py

Output:

Hello, World!

3DWEBSOFT FOUNDATION

Why Do Programmers Use "Hello, World!"?

```
main.py
  1  print("Hello World")
```

```
Hello World

...Program finished with exit code 0
Press ENTER to exit console.
```

"Hello, World!" is the traditional first program for beginners.

It helps us check that:

- Python is installed correctly.
- VS Code is working.
- We can run Python programs successfully.

Printing Different Messages

Example 1

print("Welcome to Python!")

Output

Welcome to Python!

Example 2

print("I love Coding.")

Output

I love Coding.

Example 3

print("Good Morning!")

Output

Good Morning!

Printing Your Information

print("My Name is Arjun")

3DWEBSOFT FOUNDATION

```
print("I am studying in Class 7")
print("My School is Sunshine High School")
```

Output

```
My Name is Arjun
I am studying in Class 7
My School is Sunshine High School
```

Students should replace the name and school with their own.

Printing Numbers

Python can also print numbers.

```
print(10)
print(25)
print(100)
```

Output

```
10
25
100
```

Notice: Numbers do not need quotation marks.

Printing Simple Calculations

```
print(5 + 3)
print(10 - 4)
print(6 * 2)
```

Output

3DWEBSOFT FOUNDATION

8

6

12

Python can perform simple math automatically.

Printing Shapes with Text

```
print("*")
print("**")
print("***")
print("****")
```

Output

```
*
**
***
****
```

Fun Emoji Program

```
print("😀")
print("🎉")
print("🚀")
print("💻")
```

Output

😀

3DWEBSOFT FOUNDATION

🎉

🚀

💻

Multiple Print Statements

print("Python")

print("is")

print("Fun!")

Output

Python

is

Fun!

Using Comments

Comments help explain the program.

Python ignores comments.

My first Python program

print("Hello!")

Common Errors

❌ **Missing Quotation Marks**

Wrong:

3DWEBSOFT FOUNDATION

print(Hello)

Correct:

print("Hello")

❌ **Missing Closing Bracket**

Wrong:

print("Hello"

Correct:

print("Hello")

❌ **Spelling Mistake**

Wrong:

prit("Hello")

Correct:

print("Hello")

3DWEBSOFT FOUNDATION

Practical Activities

Practical Activity

Students should:

1. Open VS Code.
2. Create a file called **firstprogram.py**.
3. Type:

print("Hello, World!")

```
print("My Name is _____")
print("I Love Python")
```

4. Save the file.
5. Run the program.
6. Observe the output.

Classroom Activity

Ask students to create a program that prints:

- Their Name
- Class
- School
- Favorite Subject
- Favorite Game

Example:

```
print("Name : Riya")
print("Class : 8")
print("School : ABC Public School")
print("Favorite Subject : Science")
print("Favorite Game : Chess")
```

Mini Challenge

Create a file named:

favorites.py

3DWEBSOFT FOUNDATION

Write a program that prints:

- 🌈 Favorite Color
- 🍎 Favorite Fruit
- 🐶 Favorite Animal
- ⚽ Favorite Sport

Example:

```
print("Favorite Color : Blue")
print("Favorite Fruit : Mango")
print("Favorite Animal : Elephant")
print("Favorite Sport : Cricket")
```

Important Terms

Word	Meaning
Program	A set of instructions for a computer
Python	A programming language
print()	Displays text or numbers
Output	Result shown on the screen
Comment	Notes ignored by Python
VS Code	A code editor
File	A saved Python program

3DWEBSOFT FOUNDATION

Worksheet

Fill in the Blanks

1. A Python program is a set of _____.

Answer: Instructions

2. The function used to display text is _____.

Answer: print()

3. Python files end with _____.

Answer: .py

4. The result shown on the screen is called _____.

Answer: Output

5. Comments start with the symbol _____.

Answer: #

Match the Following

A	B
print()	Display text
#	Comment
.py	Python file
Output	Result
VS Code	Code editor

3DWEBSOFT FOUNDATION

Quiz

1. Which function displays text on the screen?

A. write()

B. show()

C. print() ✅

D. display()

2. What is the correct way to print "Hello"?

A.

print(Hello)

B.

print("Hello") ✅

C.

show("Hello")

D.

write("Hello")

3. Which file extension is used for Python?

A. .txt

B. .jpg

C. .py ✅

D. .html

4. Which symbol is used for comments?

A. @

B. # ✅

3DWEBSOFT FOUNDATION

C. *

D. %

5. What will this program display?

print(7 + 5)

A. 75

B. 12 ✅

C. 57

D. Error

Learning Outcomes

After completing this lesson, students will be able to:

- ✅ Explain what a Python program is.
- ✅ Use the print() function correctly.
- ✅ Write and run their first Python program.
- ✅ Print text, numbers, and simple calculations.
- ✅ Identify and correct common coding mistakes.
- ✅ Build confidence in writing simple Python programs independently.
